

*"I would like to compliment your engineering and design staff for the many features that have been incorporated in the omnivan body system. Full service bodies offer the organization necessary to run our routes more efficiently. The many shelves allow us to carry a variety of products without having to off load many cases to get to a particular flavor.*

*Vending repair bodies offer highly organized parts and equipment-carrying ability that allows our employees to: 1. Find needed parts quickly, 2. Avoid having cluttered areas in the body, and 3. Allow a larger variety of smaller parts.*

*Side and rear doors provide protection from inclement weather... Thanks for a job well done."*  
**RB, Pepsi-Cola Bottling Co. of Charlotte, Inc., Charlotte, NC.**

*" ... They look professional, my drivers love them ... and they hold so much – it's like getting two trucks for the price of one ... The whole concept of the omnivan is logical. It's a system that works for us. omnivan is truly a fabricare vehicle ... omnivan is efficient. There's nothing like it on the market today. I know, I've looked."*  
**JP, Fashion Care, Atlanta, GA.**

*"It's been a while since we purchased the omnivan body from you to develop our new extrication vehicle ... The omnivan body is working very well and we are quite happy with it ... We appreciate all the help you gave us in the design of this vehicle."*  
**RW, Independence Volunteer Rescue Squad, Inc., Independence, VA.**

*"As you are aware, we at Lee Air Conditioners have been using your omnivan bodies in our service department for years. ... We like them for the following reasons:*

*We can easily change bodies to a new truck which we do here at our plant. The bodies outlast several trucks."*  
*Tools and service parts are easily accessible by the service technician.*  
*The access doors act as shelters in case of rain when working from the truck.*  
*We use smaller trucks with these bodies which operate more economically than the larger vans.*  
*The cab space only is heated and cooled which promotes prompt comfort for the employees in harsh weather.*  
*It makes a good marketing tool by being attractive and easily customized with logos and advertising.*

*There are other reasons for our use which include your prompt service, but I feel I have given enough reasons to encourage a thinking person to use your product."*

**JL, Lee Air Conditioners, Inc., Durham, NC.**

*"omnivan is the best value on the market; it's as simple as that. My drivers work faster and better than walk-in or cargo van drivers. My staff can do more work in less time. Their sales productivity increases far exceed the additional vehicle purchase price. The best financial decision an operator can make is to decide to enjoy the incredible ROI available with omnivan. Your products stand the test of time. We have the 15th body you built still in our fleet. Structurally and aesthetically it is still outstanding. I am just as proud to have that unit on the routes as I am having a brand new unit."*

**CTC, Cromer Food Services, Inc., Anderson, SC.**

*"Thanks for your interest in my satisfaction with the omnivan body I purchased a couple of years ago. I am still very pleased with the purchase as it has allowed me to expand my route and profits with a lot less manual labor compared to working out of my old cargo van. I get lots of compliments on how neat and sharp my truck looks, but I tell them it works even better than it looks."*

**DC, D & L Vendors, Lynchburg, VA.**

# THE WORK TRUCK OPTIMIZED

Our omnivan® truck bodies are widely recognized for their high quality materials, workmanship, and efficient, performance-enhancing design. An independent efficiency study, performed by a national engineering school, compared the omnivan® to a step van. The study found that with the omnivan®, delivery time can be reduced by 19% – saving you valuable time and money.

### 1. Superior Design, Materials and Construction

- Fiberglass, stainless steel, and extruded aluminum (not sheet metal) construction provide lightweight, tough, and fuel-efficient bodies.
- Less frontal area reduces wind resistance and fuel consumption compared to step vans, bay loaders and other truck bodies.
- The omnivan® is customized to your specific dimensions of length, height, and width and can be mounted on the chassis of your choice to offer superior organization and accessibility.
- A lower profile to fit in many height-restricted areas improves accessibility to accounts.
- Every omnivan® is prewired for a security alarm and each door has a recessed, stainless steel lock for exceptional security.

### 2. Top-Hinged, Side and Rear Doors with omniprops

- Outside aisles allow the driver keeps both feet firmly on the ground to allow cargo to be lifted properly with less physical stress to improve safety and reduce injuries.
- Our omniprops open and close the doors with just a slight start reducing driver fatigue and wear on the doors.
- Doors on all three sides (left, right, and rear), makes loading and unloading easier and faster.

### 3. Mounts on Your Chassis

- The durable omnivan typically outlasts several chassis, so it has been designed to easily transfer to a new chassis normally in less than a day.
- No special drivers license is required because of omnivan's® ease of driving and maneuverability.

### 4. Modular Construction

- The omnivan® is so easy to clean. Simply use warm soapy water and a brush. Drain holes allow for proper drainage.
- Design files are stored to accommodate any replacement parts or future modifications quickly.
- Smooth exterior panels make a perfect moving billboard for your organization's logo and graphics.
- The modular construction provides with lower repair and maintenance costs are lower with an omnivan®.

### 5. Exceptional Interior Customization

- Exceptional interior lighting is standard on all models controlled by a master toggle switch and separate door switches so the lights come on when a door is open.
- Supplies and tools are stored in secure, defined areas for faster location and retrieval allowing you to service more customers while reducing inventory loss
- Unlimited interior customization can include pull-out trays, slide-out walls, under-floor storage boxes, swing-out walls, equipment racks, heated, air-conditioned, refrigerated, or maintained at frozen temperatures to fit your exact needs.
